Building Secure & Compliant Landing Zones for Migrations

Case Study: Cloud consulting services and cloud integrator company ensures long term success of migration

Problem

The cloud is complex, and **clients struggle to maintain security post migration.** The Cloud Consultant was helping the client design, build and deploy to a secure and compliant cloud, **but once the consultant completed their work their expertise did not stay with the client.**

Solution

The Cloud Consultant needed a way to **codify their expertise into a scalable tool** that could **adapt to the changing cloud assets of the client**, and that could ensure cloud configuration hygiene. They found the solution in Secberus.

Outcome

The Cloud Consultant was able to **quickly design, deploy and instill confidence** in their clients, on their cloud journeys. The Cloud Consultants **could focus on improving security in recurring engagements rather than fixing deviations from baselines**. This shift enabled them to **gain more clients and keep their existing cloud clients happy**, and **do it all faster, cheaper, and better.**

"Secberus allows us to codify cloud expertise in best practices, security, and compliance so that our clients not only get a hygienic cloud, but can scale it"
